For quite some time now, I have been asked to add the cfUniForm custom tag library to [RIAForge](#) . I've been resisting doing so because the library is actually just a small portion of a huge library that I intend to eventually release, and I wanted to wait until *everything* was ready for release before going the RIAForge route.

During a recent conversation with [Dan Wilson](#) the topic of adding to RIAForge came up. I mentioned my hesitation to do so because the "complete" library was not ready for release yet. It was at this point that Dan busted out the big stick...

"There is perfect, and there is good. Sometimes the perfect is the enemy of the good."

Wow. Point made. As of today, the imperfect (but hopefully good) [cfUniForm](#) library is now on RIAForge.

Happy form building. :-)
