Well, after planning to play with CF9 for a *very* long time now but unable to find any time to do so, I am now in a situation where I must make time to learn it. As I work my way through the refactoring of an enormous code base to run on CF9, I will try and make a series of posts with any tips, tricks, or gotchas that I run across.

If you are not yet at least playing with CF9, I would encourage you to [download the Developer Edition](#) and get to working on it!
