

## **NOTE: cfUniForm Does Not Require ValidateThis!**

There seems to be a slight bit of confusion about the integration between [cfUniForm](#) and [Bob Silverberg's ValidateThis! framework](#) . Hopefully I can help clear that up with this post.

Both the cfUniForm library and the ValidateThis! framework are complete independent of one another. You can use cfUniForm without ValidateThis! like you've always been doing, without ever looking at ValidateThis! By the same token, you can use ValidateThis! without ever looking at cfUniForm.

The "integration" that I spoke of in [my previous post](#) would probably have been better worded as "support for integration". To state it as simply as I know how to, cfUniForm now supports seamless integration with ValidateThis!, but it does not require ValidateThis!.
