

Integrating cfUniForm and ValidateThis

As noted in the [cfUniForm documentation](#) , [Bob Silverberg](#) 's [ValidateThis](#) validation framework plays quite nicely with cfUniForm. However, there is one "gotcha" that I have been meaning to blog about for awhile now, but keep forgetting.

Like cfUniForm, ValidateThis utilizes [jQuery](#) 's validation plugin to handle client-side form validations. There is, however, one *really* important key to avoiding JavaScript errors on your cfUniForm + ValidateThis forms:

Make sure you call VT's `getValidationScript()` method **after** you close your cfUniForm-powered form. So, your code should look this...

```
.. </uform:form> <!-- close your form FIRST! --->
}. <!-- now call VT's getValidationScript() method --->
}. <cfhtmlhead text= "#application.ValidateThis.getValidationScript(myObject)#" />
```

For additional integration details, be sure to check out [Bob's ValidateThis + cfUniForm integration demo](#) .
