

cfUniForm - Right-Aligned Labels and No Asterisk

I sometimes get asked questions like "hey, man, how can I right-align labels with cfUniForm?" or "how can I change colors?", etc. The answer is: override the CSS! That's the entire purpose of Cascading Style Sheets. Here's a quick example of how to override a couple of default behaviors with the Uni-Form specification (which is what cfUniForm is a wrapper for).

Right-Aligned Labels

The Uni-Form spec default has <label> tags left-aligned. However, some people prefer their forms to have the text labels right-aligned, or "next to" their respective entry fields. Making this happen is incredibly simple. Just add the following to your application's stylesheet:

```
.. div.ctrlHolder > label.p.label { text-align: right; }
}.uniForm .inlineLabels label em, .uniForm .inlineLabels .label em { position: relative !important; right: auto !important; display: inline !important; }
```

Ditch the Asterisk(*)

The Uni-Form spec includes an * in the label on required form fields. Want it gone? CSS to the rescue once again.

```
.. .uniForm .inlineLabels label em, .uniForm .inlineLabels .label em { display: none !important; }
```

Easy.

Summary

CSS is your friend. :-)
