Ooops! I left out one little piece of important code with the [original demo zip file](#) . For those who downloaded it prior to about 11PM Eastern on Sunday night (12/16/07), you'll need this little snippet added to your form page so that it'll render properly in IE6 and below.

```
.. <!--[ if lte ie 6]>
}. <style type= "text/css" media= "screen" >
}. .uniForm,
}. .uniForm fieldset,
}. .uniForm .ctrlHolder,
}. .uniForm .formHint{ /* Trigger hasLayout, move to your IE specific stylesheet if possible */
}. zoom:1;
}. }
}. </style>
}. <![endif]-->
```

If you hadn't previously downloaded, the new zip file has the code plugged into the index.cfm file.
